Substitute Silica (Sand) Filter Media

-Change to Glass Filter Media-

Step 1: Remove old sand from filter

Before changing to Glass Filter Media

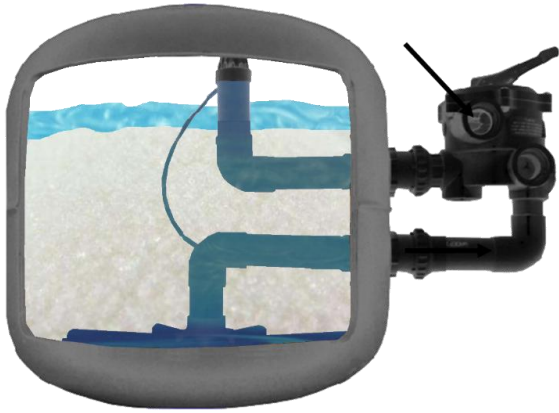

Removal of Sand (Silica) Filter Media

Old filter media has clumps of dirt

Substitute Silica (Sand) Filter Media

-Change to Glass Filter Media-

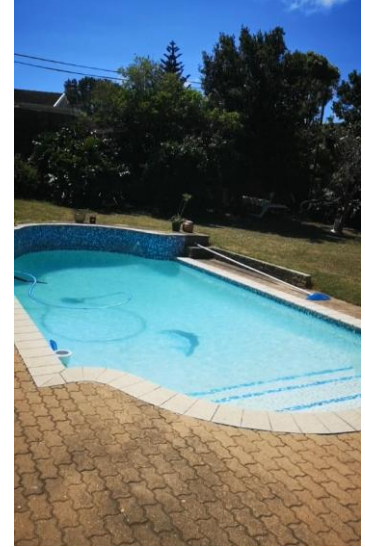

**Step 2 : Fill filter
with Glass Filter
Media**

Filling Filter with Glass

**The small granules
of glass is clean
and safe to handle**

**Final result 24
hours later – a
crystal clean pool**

Summary of Advantages / Benefits in using Glass Filter Media

01

Filters out smaller particles
Easier to keep your water clear using less chemicals

02

Excellent Water savings
Reduced backwash time and fewer backwashes needed

03

Energy and Equipment Savings
Reduced friction & increased volume = less strain on equipment

04

Longer lifespan (15 - 20 years)
No need to replace every 3 years as with sand (cost savings)

05

Increased hygiene and quality
Reduced presence of bacteria & has no buildup of biofilm

06

No channel forming in filter
More effective operation (entire filter bed is used)

Summary of Advantages / Benefits in using Glass Filter Media

07

Product is Eco-friendly
Glass Media is a recycled product that can be recycled again

08

Product is Eco-friendly
Using Glass Media reduces silica mining which destroys eco systems

09

Product is Eco-friendly
Reduces the amount of glass that will end up on landfills

10

Very easy installation

Can be done by novice users – just ask for our advice!

11

Slight negative charge

Attracts particles that will then be released on backwash

12

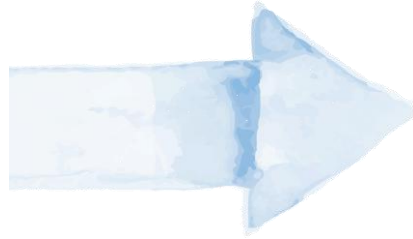

Less operational hassle

Filter can run longer before needing a backwash
